

Flutter 3.24.2 新建项目提示 The configured version of Java detected may conflict with the Gradle version

Flutter环境已经搭建成功了，但是新建项目的时候提示jdk相关的错误 The configured version of Java detected may conflict with the Gradle version in your new Flutter app.

The configured version of Java detected may conflict with the Gradle version in your new Flutter app.

[RECOMMENDED] If so, to keep the default Gradle version 8.3, make sure to download a compatible Java version (Java 17 <= compatible Java version < Java 21). You may configure this compatible Java version by running: ``flutter config --jdk-dir=<JDK_DIRECTORY>`` Note that this is a global configuration for Flutter.

Alternatively, to continue using your configured Java version, update the Gradle version specified in the following file to a compatible Gradle version (compatible Gradle version range: 8.7 - 8.7):

```
D:\flutter_demos\flutter_demo03\android\gradle\wrapper/  
gradle-wrapper.properties
```

You may also update the Gradle version used by running
`./gradlew wrapper --gradle-
version=<COMPATIBLE_GRADLE_VERSION>`.

Flutter 3.24.2 新建项目提示 The configured version of Java
detected may conflict with the Android Gradle Plugin

解决办法如下， --jdk-dir后面的参数是你jdk的home目录

```
flutter config --jdk-dir "/Library/Java/JavaVirtualMachines/  
jdk-22.jdk/Contents/Home"
```

按照提示使用flutter config配置一下 --jdk-dir就可以了
